## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 8\_Q5

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

In a file management system, users are required to provide a valid file name when creating new files. The system enforces specific rules for file names to maintain consistency and avoid potential issues. Your task is to implement a Java program named `FileNameValidator` that takes user input for a file name and validates it according to the specified rules.

Rules for Valid File Name:

The file name must consist of alphanumeric characters (letters and digits) only. The file name must have a minimum length of 3 characters.

Implement a custom exception, `FileNameValidator`, to handle cases where the entered filename does not meet the specified criteria.

***Input Format***

The input consists of a string S, representing the desired filename.

### **Output Format**

The output is displayed in the following format:

If the entered file name meets the specified criteria, the program outputs

"Valid file name"

If the entered file name does not meet the criteria and triggers the `InvalidFileNameException`, the program outputs

"Error: Invalid file name. It must be alphanumeric and have a minimum length of 3 characters."

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: myfile123

Output: Valid file name

### **Answer**

```
import java.util.Scanner;
```

```
class InvalidFileNameException extends Exception {  
    public InvalidFileNameException(String message) {  
        super(message);  
    }  
}
```

```
class FileNameValidator {  
    public static void main(String[] args) {  
        Scanner scanner = new Scanner(System.in);  
        try {  
            String fileName = scanner.nextLine();  
            validateFileName(fileName);  
            System.out.println("Valid file name");  
        } catch (InvalidFileNameException e) {  
            System.out.println("Error: Invalid file name. It must be alphanumeric and
```

```
have a minimum length of 3 characters.");
    } finally {
        scanner.close();
    }
}
```

```
public static void validateFileName(String fileName) throws
InvalidFileNameException {
    if (fileName.length() < 3) {
        throw new InvalidFileNameException("File name must have minimum
length of 3 characters");
    }
    for (int i = 0; i < fileName.length(); i++) {
        char c = fileName.charAt(i);
        if (!Character.isLetterOrDigit(c)) {
            throw new InvalidFileNameException("File name must be
alphanumeric");
        }
    }
}
}
```

**Status :** Correct

**Marks : 10/10**
